Summary

AI and Data Science student skilled in **MERN stack** development and practical programming.

Technical Skills

- **Languages:** **Python**, **JavaScript**
- **Frontend:** **React.js**
- **Backend:** **Node.js**, **Express.js**
- **Database:** **MongoDB**, **PostgreSQL**
- **AI/ML:** **Scikit-learn**, **Data Visualization**, **EDA**
- **Tools:** **Git**, **GitHub**, **Linux**, **VS Code**, **Opencode** (AI-assisted development)

Experience

Electrical Engineer Trainee – MAHADISCOM, Solapur June 2024 – July 2024

- Acquired practical exposure to core electrical engineering operations in a live distribution environment.
- Worked on a single-phase transformer, observing testing, maintenance, and operational procedures.
- Gained hands-on understanding of **relays**, **protection systems**, and electrical safety equipment.
- Developed insight into the functioning of power distribution and load management systems.

Web Team Member – ACM Chapter, AISSMS-IOIT Ongoing

- Contributed to the ACM chapter website by resolving frontend issues, improving responsive UI components, and implementing bug fixes using **HTML**, **CSS**, **JavaScript**, and **Next.js**.
- Collaborated with team members through **Git** and **GitHub**, participating in issue tracking, pull requests, and code reviews to deliver incremental website improvements.
- Gained hands-on experience working in a collaborative development environment while maintaining production-facing web applications.

Projects

AI-Powered Lead Automation System for ACM Chapter ***Python — Gemini AI — Google Maps — Google Sheets — SQLAlchemy***

- Built an intelligent lead generation platform automating business discovery, website scraping, AI-based opportunity analysis, and lead scoring for real-estate and local businesses.
- Implemented an extensible pipeline with **APScheduler**, **SQLAlchemy**, **Google Sheets** integration, retry mechanisms, rate limiting, and configurable scoring to automate daily lead qualification and reporting.
- Enhanced code quality and developer productivity using **OpenCode**, **Ponytail**, **Headroom**, modular architecture, reusable components, and clean design patterns for efficient, production-ready automation workflows.

Khanawala (Freelance Project – In Development) ***Flutter — Dart — Material 3 — ChangeNotifier — Google Sign-In — Supabase — PostgreSQL***

- Developing a freelance food delivery application for a single-restaurant cloud kitchen delivering homemade meals to students and working professionals, focusing on intuitive UX and scalable architecture.
- Implementing modular state management using **ChangeNotifier** and **ListenableBuilder**, with **Google Sign-In** authentication, menu categorization, real-time search, cart management, delivery slot selection, live order tracking, order history, and responsive light/dark themes.
- Designing a production-ready backend using **Supabase**/**PostgreSQL** with database migrations, row-level security, configurable application settings, and reusable **Flutter** components.

Education

B.Tech in AI-DS AISSMS-IOIT, Pune 2025–2028

Diploma in Electrical Engineering Government Polytechnic, Solapur Completed 2025
